science is built on progress but behind every discovery lies human drama competition ego betrayal and obsession the battle for discovery uncovers the forgotten rivals that defined scientific history and shaped the modern world from the feud between tesla and edison over electricity to rosalind franklin s looked contribution to dna s double helix to the quiet war between newton and leibniz over calculus this book brings to life the personal and professional conflicts that turned laboratories into battlegrounds inside you ll find rivalries that fueled innovation how competition often pushed science forward faster than cooperation

could the politics of credit why fame and recognition rarely went to the true pioneers human flaws in a rational field pride envy and ambition driving decisions as much as data forgotten figures the scientists whose names never made the textbooks despite changing the course of history written in an accessible narrative style this book transforms what might seem like sterile academic moments into gripping human stories each chapter reads like a mini drama revealing the tension between vision and validation intellect and integrity ideal for students educators and anyone fascinated by the people behind the discoveries the battle for discovery remains us that science is not just a quest for truth it s a struggle for legacy

the high time resolution radio sky represents unexplored astronomical territory this thesis presents a study of the transient radio sky focussing on millisecond scales as such the work is concerned primarily with neutron stars in particular this research concentrates on a recently identified group of neutron stars known as rrats which exhibit radio bursts every few minutes to every few hours after analysing neutron star birthrates a re analysis of the parkes multibeam pulsar survey is described which has resulted in the discovery of 19 new transient radio sources of these 12 have been seen to repeat and a follow up campaign of observations has been undertaken these studies have greatly increased our knowledge of the rotational properties of rrats and enable us to conclude that they are pulsars with extreme nulling and or pulse to pulse modulation although the evolution of neutron stars post supernova is not yet understood it seems that rrats fit into the emerging picture in which pulsar magnetospheres switch between stable configurations

with the discovery of planets beyond our solar system 25 years ago exoplanet research has expanded dramatically with new state of the art ground based and space based missions dedicated to their discovery and characterisation with more than 3 500 exoplanets now known the complexity of the discovery techniques observations and physical characterisation have grown exponentially this handbook ties all these avenues of research together across a broad range of exoplanet science planet formation exoplanet interiors and atmospheres and habitability are discussed providing in depth coverage of our knowledge to date comprehensively updated from the first edition it includes instrumental and observational developments in depth treatment of the new kepler mission results and hot jupiter atmospheric studies and major updates on models of exoplanet formation with extensive references to the research literature and appendices covering all individual exoplanet discoveries it is a valuable reference to this exciting field for both incoming and established researchers
